Executive Summary

In today's digital technology era, we are well-versed in providing complete IT solution to wide ranges of clients.

Inventa Digital Technologies LLC was established in UAE in 2018 by group of highly motivated experienced professionals with strong focus and partnership with some of the most reputed international OEM brands. We provide unparalleled services in the areas of Plan, Design, Implementation & Optimization for all data, security, Voice, Data centre, IOT requirements across industry verticals.

We, at Inventa, believe that a vendor neutral approach for any IT requirement is the key to design and deliver a highly reliable and

secure network. With an extensive on field experience, we provide tailored, technology driven solutions to help businesses meet their strategic objectives. It is our constant endeavour to achieve excellence in customer satisfaction by ensuring timely and complete delivery. We pride ourselves in the harmony we have achieved in understanding the clients' business demands and translating the same into tangible technology solutions. Building highly flexible and scalable, yet robust and secure network infrastructure that provide a cost-effective means for our clients to excel in their businesses is our primary focus. The core team at Inventa has been instrumental in delivering various projects including technology migration, data centre network design & implementation, nation-wide WAN technologies for stock exchanges

and banks in the country. We have a thorough understanding of the technology requirements and business criticality of various verticals like Hospitality, Manufacturing, Banks, Government, retails etc.

Our experience, determination, commitment and focus to serve better

for our customers has kept us engaged in always winning and these breathless efforts paid us into striving for the next level of efficiencies in delivering nothing less than unparalleled “Best”.

Our Vision

We are the company which is “Marching for excellence”, to be the preferred and most trusted company for the IT Technologies that touches all corners of the life, people and industry.

Our Mission

Our Solutions focuses on Customer Business needs, ease of operations to deliver premium value to our customers. Our People centric policies engage our employees to Innovate, learn & execute. Our streamlined IT strategies are integral for businesses to thrive in today’s fast-paced, digital world.

Our Values

Our Product and Services offering Cyber Security

We provide end to end solution in cyber security

-  **Email & Web Security** - Top-rated protection from common and advanced threats while integrating robust data protection capabilities to avoid data loss. It is to shield users, and ultimately data, from a wide range of cyber threats. These

includes ever growing volumes of unwanted spam, socially-engineered phishing and business email compromise, accelerating variants of ransomware and other malware, increasingly targeted attacks from adversaries of all kinds, and more. At the same time, it can be used to protect sensitive data of all types, reducing the risk of inadvertent loss and/or non-compliance with regulations like HIPAA, PCI, GDPR, and more. It is available in on-Prime and cloud model.

- ✚ **Visibility, Control, and Automated Response across your wired and wireless Network.** We provide solution that enables the network visibility to see everything connected to the network, as well as the ability to control those devices and users, including dynamic, automated responses. It supports Extensive multi-vendor and it also interact with network devices (switches, wireless access points, firewalls, clients) from more than 150 vendors. It can be deployed as appliance or on VM. Reports helps for compliance requirements.
- ✚ **Next Generation Firewall & IPS** - Next-generation firewalls reduce cost and complexity with full visibility into applications, users and networks and provides best of breed security, comprehensive visibility and advanced layer 7 security, including threat protection, intrusion prevention, web filtering and application control.
- ✚ **Advance End point Protection** - It provides advanced endpoint protection with pattern-based anti-malware, behaviour-based exploit protection and can be integrated to Sandboxing.
- ✚ **SIEM Solution** - Multivendor Security Incident and Events Management solution brings it all together. Visibility, Correlation, Automated Response and Remediation in a single, scalable solution
- ✚ **DLP** - Insider Threat Management and Behaviour Analysis
